

Smartlipo MPX LaserBodySculpting Q&A

Tired of walking on that treadmill and getting nowhere, literally?

If you watch what you eat and find those extra miles are getting you nowhere in terms of your body shape, Smartlipo MPX may be just what the doctor ordered.

The treadmill is no match for Smartlipo MPX, the latest innovation in LaserBodySculpting. Smartlipo MPX provides maximized results for both fat removal and skin tightening¹. You can finally have that body you have always wanted.

Inquire at the front desk to see if Smartlipo MPX is right for you.

How Does Smartlipo MPX work?

This laser assisted lipolysis procedure is performed using a one millimeter cannula (or small tube) inserted into the skin. The laser fiber inside the cannula delivers energy directly to fat cells using 2 different wavelengths, causing them to rupture and drain away as liquid. The dual wavelengths also allow for more effective tightening of your skin¹.

What areas of the body can be treated?
Smartlipo MPX is ideal for areas of skin laxity, such as the neck and arms or for removal of fat from the abdomen, love handles, saddles bags or inner and outer thighs.

What are the advantages of Smartlipo MPX over conventional liposuction procedures?
Both treatments effectively remove fat, but conventional liposuction can leave behind unsightly pockets of skin. The Smartlipo MPX wavelengths have been shown to increase collagen and reorganize collagen fibers to tighten and improve the quality of your skin.

Is there a recovery period?
Smartlipo MPX is a minimally invasive procedure which usually requires only local anesthesia. Some light trauma can occur, but you will be able to return to work in a couple of days and resume exercise after 2 weeks.

Am I a candidate?
Smartlipo MPX is designed for removing unwanted fat and tightening the skin¹. The ideal candidate is in good health and normal body weight.

Smartlipo treatments are the most sought after cosmetic procedures performed today².

"I experienced no downtime, no recovery time, and no pain. I went into work the next day and nobody would know anything. And hopefully before I hit forty I'm going to be able to wear my two-piece bathing suit for the first time in my life."
